## Microfluidic Chip

# Fully Automated Molecular POCT Analyzer

The new molecular POCT analyzer independently designed and developed by Bioer Technology based on microfluidic chip technology uses unique centrifugal rotation (acceleration, deceleration, positioning) to make the liquid flow and mix, which can complete the whole process of nucleic acid extraction and amplification detection of tested samples in the microfluidic chip, making experiments simpler, faster and more accurate. The instrument structure is simple, easy to carry, no debugging is needed, plug and play. The operation of the software interface is simple without other experimental settings.

## Features

### Full Automated

Complete the nucleic acid extraction and amplification detection automatically through liquid flowing, no need to add extra liquid.

### Simple Workflow

The reagents are pre-embedded, with minimal hands-on time, just to add samples in, then results out.

### Expandable Modules

Scalable configuration allows up to 4 units to be controlled by one laptop

### Multiple Detection

4-6 channels design, support 48 fluorescent targets at the most. Supports customized panel.

### All-in-One Cartridge

Totally enclosed microfluidic chip to reduce the risk of contamination.

### Fast, Easy and Efficiency

Sample in, result out in 60 min.
